

AL-KO Vehicle Technology at the Caravan Salon 2026: Focus on comfort, safety and connectivity

AL-KO Vehicle Technology will be showcasing exciting products and a major innovation at the Caravan Salon 2026, taking place from 28 August to 6 September in Hall 14, Stand A 03/01-03, as well as in Outdoor Area 13-3.

World first for comfortable manoeuvring

Visitors to the Caravan Salon will be able to experience a special innovation in manoeuvring: AL-KO Vehicle Technology will be presenting a technical new product for caravans. The focus is on user-friendliness, weight reduction and innovative technology.

Stable positioning with AL-KO VT levelling systems

At the 2026 Caravan Salon, AL-KO VT will be showcasing its range of hydraulic levelling systems. With [LevelM Pro](#), [LevelVan](#), [LevelC](#) and the [HY4 system](#), the company is presenting solutions for various vehicle types. These range from panel vans to caravans and integrated motorhomes. These systems facilitate convenient levelling and ensure a stable stance upon arrival.

A particular highlight at the stand will be the [LevelM Pro 4x4](#). This hydraulic levelling system has been specifically developed for the Mercedes-Benz VS30 4x4 chassis. Its extra-long cylinders provide up to 300 mm of ground clearance. This makes the system suitable for vehicles travelling off the beaten track. Levelling can be carried out at the touch of a button.

More comfort and protection when stationary

The range is complemented by the [COMFORT DRIVE](#) chassis control, which provides greater driving stability, and the [PROSAFE](#) security accessory, which offer reliable theft protection while stationary.

AL-KO VT thus offers a coordinated product portfolio of various solutions for comfortable and safe travel.

Ease of use is at the heart of our carrier systems

Motorhome owners will find the right solution for the safe and comfortable transport of bicycles, e-bikes or scooters with AL-KO VT's rear carrier systems and tow bars.

The AL-KO Vehicle Technology Group is a swiftly growing global technology group and a business unit of DexKo Global. With high-quality chassis and suspension components for trailers, leisure and commercial vehicles, construction and agricultural vehicles, the group represents the best in functionality and comfort as well as innovations to ensure greater driving safety. Founded in 1931 the group today has around 3,000 employees at more than 40 locations worldwide. Find out more at www.alko-tech.com

DexKo Global Inc. is one of the world's leading manufacturers of high-quality chassis technology, chassis assemblies, accessories and hydraulic brake components. DexKo Global was founded in 2016 through the merger of Dexter and AL-KO Vehicle Technology. Headquartered in Novi, Michigan/USA, the company employs around 6,000 people in more than 100 production facilities and distribution centers. For more information, please go to www.dexko.com

ONDA connects key vehicle functions

The [ONDA SMART SYSTEM](#) is a highlight at the stand, as it allows the motorhome's on-board power supply to be controlled via a smartphone app. The system also enables the battery, solar panels and power consumption to be monitored. Another key focus is [ONDA Connectivity](#), which enables motorhome functions such as lighting, heating and the battery to be operated via an app from anywhere in the world.

The [ONDA Line touch panels](#) provide convenient and clear access to all ONDA Connectivity functions. The panels present the extensive range of information and control options in a structured manner, using intuitive graphical elements to make operation even more user-friendly.

Flexible solar modules for different vehicle profiles

This year, the group is once again presenting products from its electronics division at its stand.

At AL-KO VT, caravan and motorhome owners will find [innovative photovoltaic solutions](#) that combine maximum efficiency with modern design and flexible integration. The focus is on all-black modules such as the MFBC190, which achieves the highest efficiency currently available on the market thanks to back-contact technology.

The module can be connected to the ONDA Connectivity app via Bluetooth. This allows performance data to be monitored via a smartphone or the on-board display.

With the Flexible Series, AL-KO VT offers two adaptable solar modules. Thanks to their flexible design, the MFFL150 and MFFL190 models can adapt to different body contours.

The modules are bonded directly in place and no drilling is required. This also makes them suitable for installation on curved surfaces. The photovoltaic modules utilise PERC technology and feature an anti-reflective coating. Durable materials ensure they can withstand a variety of travelling conditions.

The range is completed by matching controllers, cables and mountings to form a fully integrated system.
